### **DETAILED ACTION**

Page 2

### Election/Restrictions

1. Claims 1-8 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected groups I, II, and III, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on January 16, 2007.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 9-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hashiguchi et al (US 5,486,243).

Hashiguchi teaches an Al-Mg alloy comprising (in wt%): 3-10% Mg, a total of 0.3-2.0% Fe + Si, opt. 0.02-0.5% ea at least one of Cu, Mn, Cr, Zr, Ti (column 2 lines 19-25), which overlaps the instant ranges of Mg, Fe, Si, Cu, Mn, Cr, Ti (cl. 9, 12, 13). Hashiguchi teaches a Fe/Si ratio of typically 1-2 (see Table 1). Because Hashiguchi teaches an overlapping Al-Mg-Fe-Si-Mn alloy, and wherein the Fe/Si ranges implied by the Fe and Si ranges of Hashiguchi broadly overlap the presently claimed ratio (cl. 9, 10, 11), it is held that Hashiguchi has created a prima facie case of obviousness of the presently claimed invention.

Overlapping ranges have been held to be a prima facie case of obviousness, see MPEP § 2144.05. It would have been obvious to one of ordinary skill in the art to select any portion of the

Application/Control Number: 10/815,602 Page 3

Art Unit: 1742

range, including the claimed range, from the broader range disclosed in the prior art, because the prior art finds that said composition in the entire disclosed range has a suitable utility.

Additionally, "The normal desire of scientists or artisans to improve upon what is already generally known provides the motivation to determine where in a disclosed set of percentage ranges is the optimum combination of percentages," In re Peterson, 65 USPQ2d at 1379 (CAFC 2003).

#### Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Janelle Combs-Morillo whose telephone number is (571) 272-1240. The examiner can normally be reached on 8:30 am- 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on (571) 272-1244. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
